Building the Global Standard for Continuous Cognitive Management

MyRhythm turns episodic care and fragmented productivity tools into one always-on support layer for cognition in real life.

- Powered by Collaborative Cognitive Management (CCM)
- From discharge cliff to daily continuity
- Designed for life, work, family, and clinical recovery

Your brain is your operating system. It has no support layer.

Cognitive support disappears exactly when life begins again

After discharge, after meetings, after good intentions — people are left alone to maintain continuity with no shared infrastructure.

- The discharge cliff turns progress into relapse risk
- Productivity tools assume reliable cognition already exists
- Families, clinicians, and employers all see the same failure from different angles

167 hrs

every week outside therapy where continuity must survive without support

Category Creation

CCM defines a new category: Continuous Cognitive Management

Not a note-taking app. Not episodic therapy. A persistent operational layer that keeps people functionally connected to intention, action, and support.

Collaborative

Support Circles and Sync-Point digitise scaffolding and reduce relational friction.

Cognitive

Rhythmic Intelligence and the Cognitive Metronome restore timing, regulation, and re-entry.

Management

Energy-aware scheduling and Memory Bridge sustain execution in the real world.

Reliability is the bridge to confidence, productivity, and continuation

MyRhythm does not force harder work. It helps people become reliably re-engageable.

01

Use MyRhythm

02

Feel reliable again

03

Rebuild self-trust

04

Increase productivity

05

Sustain continuation across life contexts

Why Now

The world has standards for devices, records, and billing — not for cognitive continuity

This leaves a global gap between clinical gains and lived function, especially across ABI, TBI, ADHD, ageing, caregivers, and knowledge work.

- Rising neurological burden meets overloaded support systems
- Employers and insurers need functional outcomes, not abstract compliance
- WHO-scale relevance emerges where cognition, participation, and independence intersect

The LEAP platform operationalises CCM

A modular system that can become the reference model for continuous cognitive management.

Memory Bridge

Capture commitments, context, and conversations before they disappear.

Rhythmic Intelligence

Model user rhythm, strain, and continuation friction over time.

Support Circle

Coordinate trusted humans around the user without adding chaos.

Sync-Point Dashboard

Give teams, families, and clinicians one shared continuity surface.

Standard Path

A standard spreads by becoming useful before it becomes official

We expand from concentrated need into institutional trust and then into policy-grade relevance.

01

Clinical pilots

02

Family use

03

Employer adoption

04

Insurer outcomes

05

WHO / system-level framing

Moat

Our moat is not just software — it is the emerging CCM standard itself

The more MyRhythm structures continuation data, support coordination, and functional outcomes, the harder it becomes to replace.

- Proprietary language: CCM, Continuation Friction, Transition Threshold
- Lived-experience foundation plus clinical relevance
- Cross-context data moat spanning home, work, care, and recovery

Business Model

Revenue compounds as CCM becomes infrastructure

We monetise where continuity creates measurable value.

Direct consumer

Subscriptions for people managing cognitive load and recovery.

Clinical

Licensing for post-discharge continuity and rehab support.

Employer

Team continuity tools for high-friction knowledge work.

Insurer / system

Outcome-linked pathways as continuation data matures.

The Ask

Back the company defining the global standard for continuous cognitive management

We are raising pre-seed capital to prove outcomes, formalise the CCM model, and scale MyRhythm into the reference platform for cognitive continuity.

- Build clinical-grade product and data infrastructure
- Complete pilots that validate continuation outcomes
- Translate market adoption into category leadership

From support tool to global standard.
